WEB POWERED SECURITY

+

Control 4<sup>®</sup>

Inception is an integrated access control and security alarm system with a design edge that sets it apart from the pack. Apart from its modern and sleek looks, Inception's software is built directly into the controller - so the only tool you will need is a web browser.

With a step by step commissioning guide and simple interface, Inception is easy to install, easy to use and outstandingly powerful in its class.

# inception

WEB POWERED SECURITY

## Web Powered Convenience

With Inception there is no need to install software on a computer, no need to leave a computer on site and no issues with software/firmware compatibility. Instead, the installation process is as simple as powering up the controller, connecting the network cable (or use the optional WiFi adapter) and using any web browser to navigate to Inception's web page. Here you will find everything you need to set-up, commission and operate the entire system.

End users can conveniently use any existing computer, tablet or smartphone to control their Inception system via the fully featured user interface.

## Seamless Integration

The integration allows Inception's intruder detection and access control features to be integrated seamlessly into a smart home or business system. Turn on lights, play your favourite playlist or control any smart device as you badge to enter your home.

## Take Your Smart Home to the Next Level

- **Full Area State and Control** – Feedback for entry delay, exit delay, arm warning and area alarms can be shown on Control4 interfaces. Areas can be armed in Away, Stay and Instant modes including prompts and bypass abilities for unsealed inputs.
- **Input State Syncing** – All inputs in Inception can be synced to Control4 with live state changes. These inputs can be simultaneously used for security in Inception and automation in Control4, such as controlling lights when movement is detected or showing the current state of doors and windows.
- **Output Control** – All Inception outputs can be controlled from Control4. These could control any of the physical outputs, or used to trigger custom automation in Inception.
- **Door Control** – In addition to controlling the security features of Inception, the integration allows all doors to also be controlled with state feedback.
